

ABSTRACT

5       The invention provides a method of detecting the  
presence of anti-MHC antibodies in a sample comprising  
contacting said sample with one or more recombinant MHC  
10       molecules or functionally equivalent variants,  
derivatives or fragments thereof and detecting the  
binding or absence of binding of antibodies to said  
recombinant MHC molecules. This method allows the  
10       detection and/or identification of one or more specific  
MHC particularly HLA allele antibodies.
